

## Process Training Unit

# PH & Conductivity

### Course Information

This one-day, application-focused training is designed for professionals seeking expertise in liquid analysis, specifically PH and conductivity measurement. The course blends theory, technology, practical installation, calibration, troubleshooting, and hands-on exercises to ensure participants can confidently specify, install, and maintain PH and conductivity sensors in industrial environments.

### Topics Covered

- Understand the principles of PH and conductivity measurement
- Select and install appropriate sensors for various applications
- Perform calibration and maintenance routines
- Troubleshoot common issues for reliable sensor performance
- Apply advanced diagnostics and utilize modern platforms for liquid analysis
